The Importance of Having the Right Cleaning Tools

Pipes exist to transport water or other liquids and gases from one point to another. As simple as it sounds, a piped system requires proper maintenance to optimise efficiency, and cut down on costly faults and repairs, such as corrosion, joint failure and cracks.

Furthermore, improper maintenance may lead to the formation of deposits such as iron sulphate, mineral deposits and scale. Damaged pipes may also introduce bacteria into a piped water system.

Nobody wants a system breakdown because of deteriorating pipes. Therefore, select the right cleaning tools for effective cleaning and maintenance – and prolong the life of your pipes.

Our pipe cleaning brushes help keep pipes clean, so they can do their job efficiently over the long run. We manufacture all brushes in our own factory, making sure the durability and quality of our products are of the highest standards expected by our customers.

We also provide bespoke brushes for other purposes, so get in touch with us for your pipe brush needs today.

Pipe Cleaning Brushes

We have a wide range of pipe cleaning brushes. Each is specifically designed to make cleaning pipes easy and efficient. At Speedy Brush, we understand the importance of having the right tool for each job and that’s why our range is so varied with many different widths and lengths to make sure you get the perfect brush for the job.

All our brushes are manufactured by ourselves so they are designed for industrial level usage. We have brushes in either nylon or polypropylene. Our coarser brushes are ideal for cleaning challenging areas, where dust and dirt build-up is more likely to occur.

Bespoke Pipe Cleaning Brushes

For larger quantities we will manufacture bespoke brushes to your specification – Please email for details

Hygienic Pipe Cleaning

Extremely high standards of hygiene are vital for companies that produce or process food or drink intended for human consumption. In most countries, the standards of hygiene demanded for pet food manufacture are also extremely high. A wide range of other industrial processes also require hygienic (often referred to as ‘sanitary’) conditions.

Maintaining a hygienic environment includes keeping the machinery that processes product, and in the case of liquids, the pipework or tubing that transfers it, in a safely clean condition. In food and drink processing, this ranges from the raw ingredients stages to the finished and packed products.

Flexible

Ensure high reach pipes and ledges are cleaned thoroughly and effectively using GI Industries flexible, hygienic brushes bend to contours of surface being cleaned.

Types

We offer a stiff nylon brush styles, our brushes allow for a more thorough cleaning. In certain case we can also use the DCBH range of brushes as well. Ideally suited for mold issues.
